MASTER KEY

25YEAR MECHANICAL WARRANTY

The locks, hardware and accessories that you install on your buildings all rely on the integration of the lock cylinder and the key. The lock cylinder and key constitute the keying system. The lock cylinder is central to the lock mechanism installed on your door. This combination controls who is allowed or denied access to the door.

ASSA ABLOY Australia Pty Limited manufacture a range of Lockwood Cylinders to suit residential and commercial applications.

With technological changes in the security industry, you now have a choice of how you wish to secure your premises and control the access throughout the building.

To begin with, you have a choice of a standard pin tumbler mechanism. This is a convenient system available in five and six pin variations and suitable for residential and commercial applications.

The next option is a keying system that incorporates features such as Design Registration and Patent Protection.

Control of the distribution of keys and keyblanks ensures that only authorised companies and individuals can purchase additional keys for your premises.

Only security professionals who have complied with strict guidelines are able to purchase certain Lockwood restricted keying system products. These professionals maintain your keying system by verifying that the authority criteria has been met.

Once you have established the type of keying system that suits your needs, you can consult our Special Keying Advisory Service to determine the keying schedule for your building. This may be a Grand Master Key System, a Master Key System or the simplicity of one key convenience for your home.

Lockwood GEN6TX®

The range of key and barrel profiles in the Lockwood GEN6TX® system are Design Registered in Australia and New Zealand. This is a six pin inline keying system that is able to be transferred to a Lockwood GEN6TX® Service Centre, or can be maintained through our factory.

General Keying Profiles

Standard Lockwood cylinders and locks are available to be specially keyed to suit your individual requirements. This allows you to choose the keying access to suit your needs, without restricting access to key cutting.

The Pin Tumbler Mechanism

CYLINDER
SPLITLINE
TOP PINS
BOTTOM PINS
PLUG OR BARREL
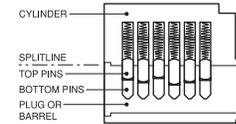

A standard pin tumbler cylinder with the key removed, showing the top pins held in their locking position across the splitline between the plug or barrel and cylinder.
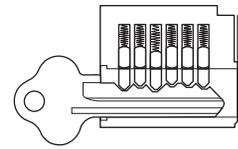

The same cylinder with the correct key inserted, showing pin-breaks aligned with the splitline between the plug or barrel and cylinder, allowing the key to be turned.
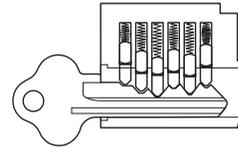

The same cylinder with an incorrect key inserted showing the pin-breaks misaligned with the splitline, preventing the key from being turned.
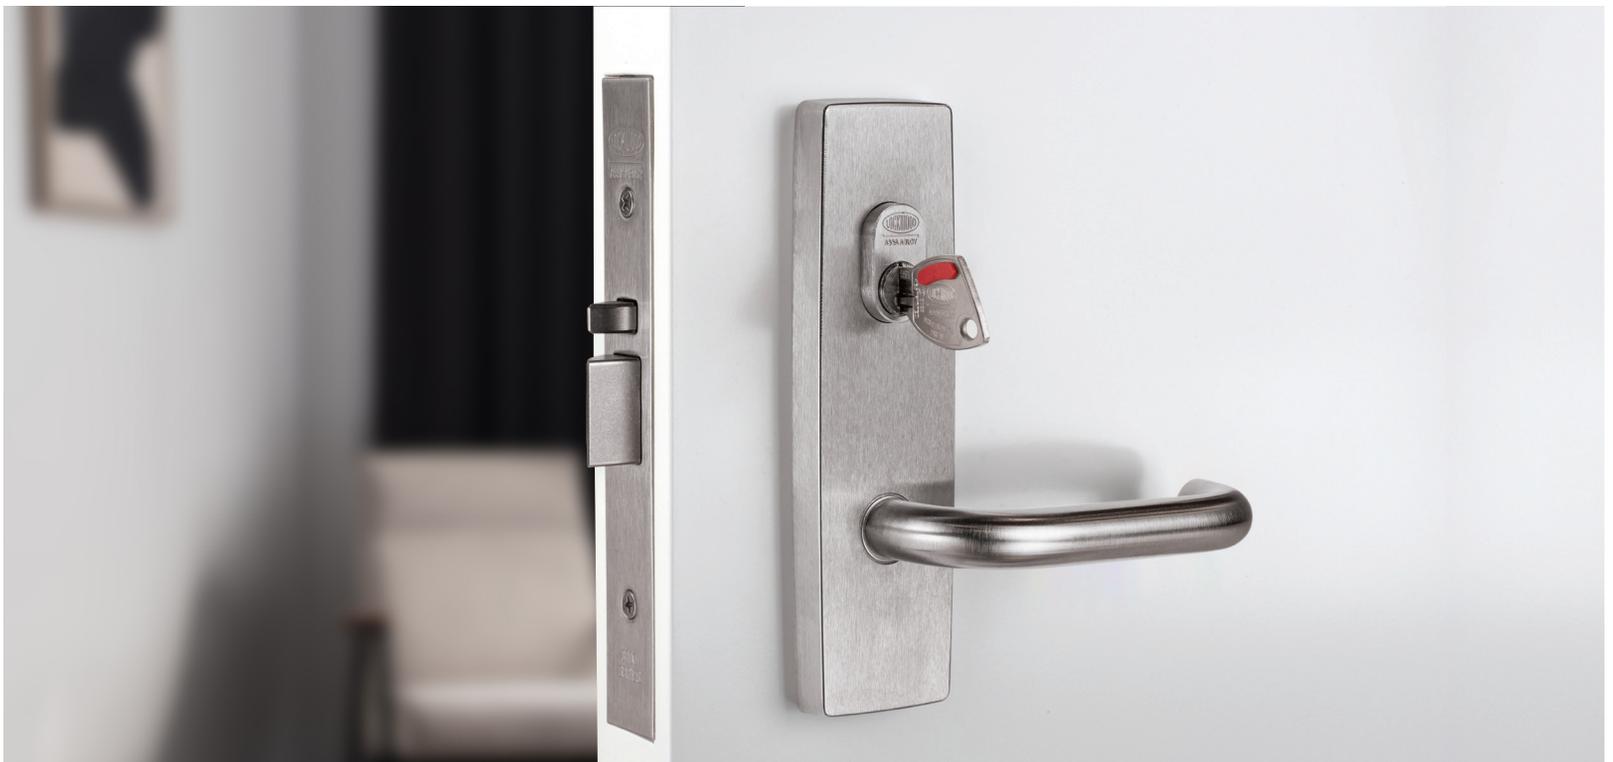

Special Keying Systems

Most Lockwood locks with pin tumbler cylinders are supplied individually keyed. To provide extra convenience and security, specially keyed systems have been developed to enable the customer to control those locks which an individual is authorised to operate.

A specially keyed system designed to meet your individual requirements can be included in the specification of a new building or can be gradually introduced into an existing complex as old locks are replaced.

Specially keyed systems tend to grow as businesses grow. Therefore, align your keying needs with your projected growth.

Once you install a Lockwood specially keyed system, you open a permanent line of security. Our records enable duplicate keys or additional locks to be supplied with ease and accuracy, but only on receipt of an official order, with all special keying records kept in strictest confidence.

Keyed to Differ (KD)

With a keyed to differ system, each lock can only be opened by its own individual key. All Lockwood locks are supplied 'keyed to differ' unless a special keying system is requested.

Keyed Alike System (KA)
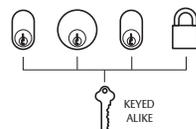

This system allows for a number of locks to be operated by the same key, it is ideally suited to residential applications such as front and back doors. There is no limit to the number of locks which can be keyed alike.

Master Keyed System (MK)

A Master Keyed System is one where each lock has its own individual key which will not operate any other lock in the system, but where all locks in the system can be operated by one master key.
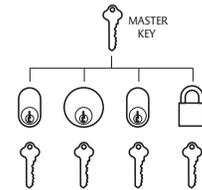

Grand Master Keyed System (GMK)

The Grand Master Keyed System is an extension of the Master Keyed System where each lock has its own individual key and the locks are divided into two or more groups. Each group of locks is operated by a master key and the entire system is operated by one grand master key.
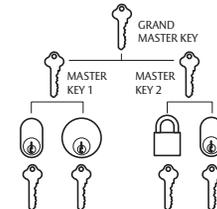

Maison Keyed System (MAIS)

This system is widely used in apartments, flats, office blocks, hotels and motels. Each apartment, flat or office has its own individual key which will not operate the lock to any other apartment, flat, hotel room or office but will operate the locks to communal entry doors and other services areas.
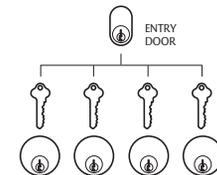

Construction Keyed System (CK)

A system where it is necessary for contractors to gain entry to a building during construction. Once construction is complete the owners keys will block further access by the contractors.
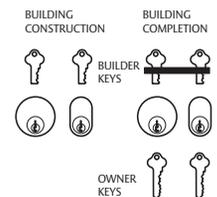

### Multi-Element Profile Keying System (MEP)
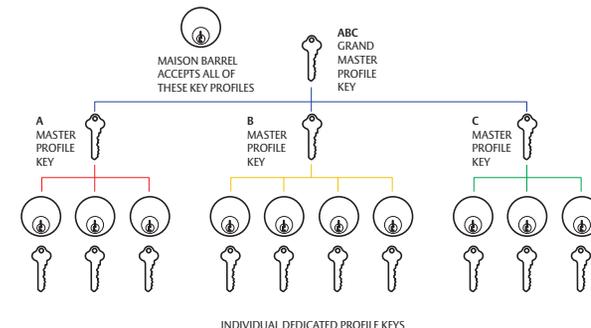

A series of unique element key profiles where each element changes the overall shape of the profile. Each individual profile key will enter a dedicated keyway. The elements of some of these individual profiles in a group can be incorporated in one profile, resulting in a master profile key capable of entering all dedicated keyways in that group. Inclusion of all elements in the profile will result in a unique grand master profile capable of entering all corresponding individual keyways created by the elements in the series.

25YEAR MECHANICAL WARRANTY

GEN6TX® Keying Platform

Description

The Lockwood range of legally protected keying platforms now includes GEN6TX®, a further evolution of Lockwood's proven Generation Six platform. GEN6TX® uses the patent protected FP2 feature, giving legal protection to your restricted key system and offering security with the ability to control your keys.

Features and Specifications

- Nickel silver keys for superior strength
- Economical restricted keying platform for key control
- Lockwood proven design and manufacturing quality
- Locally designed and manufactured
- Colour coded inserts for key identification

Legal Key Control

Key control is fundamental to the security of your building. Legal protection has been afforded to the GEN6TX® keying platform in the form of patent in Australia, as well as design registration in both Australia and New Zealand.

Serviced Level System

GEN6TX® Serviced Level Systems are initially assembled by ASSA ABLOY Australia Pty Ltd.

Once the system has been supplied, the system records are available to be transferred to an approved GEN6TX® Authorised Service Centre.

GEN6TX® Authorised Service Centres

The use of a GEN6TX® Authorised Service Centre allows local servicing of your key system for day to day requirements. Each system is registered and signatory control applies to additional key requirements.

Identification of Keys

With a distinctive key head shape, individual keys within a master key system can be easily recognised through the use of new GEN6TX® colour coded inserts. There are a total of twelve colours to choose from.

25YEAR MECHANICAL WARRANTY

GEN6TX® Keying Platform

FP2 Feature

GEN6TX® introduces the FP2 feature on barrels and keys. The FP2 feature provides increased protection via a two-way stop-surface system. One or both shoulders on the key will contact stop surfaces on the barrel, but there are three-barrel types mixed to randomize the active stop surfaces.

GEN6TX® keys are fully backwards compatible with Generation 6 and GEN6T systems. Generation 6 or GEN6T keys cannot be used with GEN6TX® barrels.

Modular Cylinder Extensions

The Lockwood's new Modular Cylinder Extensions provide a simple and effective method of producing an extended cylinder. The onsite flexibility of this solution will save both time and money in all applications where extended cylinders are required.

Extended cylinders are often required where a door thickness of 50mm or greater, or when the mortice lock is mounted off centre in the door. The extra length in the cylinder is required to bring the face of the cylinder out from the door and escutcheon to enable use of the key.

Virtually any length cylinder can be made by stacking as many or as few extension pieces as required together and screwing them into the back of a special extended cylinder base.

The desired cam required for the special lock function is attached to the end of the extended cylinder and then it is ready for installation.

Cylinder

A special extended base cylinder is required as it has two tapped holes in the back of the cylinder to accept the assembly screws to retain the extension kits. These cylinders use the standard 570 type barrel. These extended base cylinders are available in standard and Lockwood MT5+® Keying Systems with a universal barrel adaptor to drive the barrel extensions found in the extension kits.

Extension Kits

There are three different size extension kits that can be mixed and matched with the extended cylinder base to make up the desired length cylinder. They come in 7mm, 10mm and 24mm sizes. Each kit comes complete with the cylinder extension, barrel extension and universal barrel adaptor screwed to the barrel extension. Once the cylinder is assembled the rear barrel adaptor is removed and the standard locking cam (X, Z, Y, etc.) is fitted to operate the mortice lock.

Assembly Screws

There are four lengths of assembly screws that are available to hold the extension kit/s to the extended base cylinder, depending on the overall length required.

How to Order

You will need to order the extended base cylinder (in the required keying system), the extension kit or kits needed to make up the cylinder length and the assembly screws to hold the extension kits to the extended base cylinder. The end cam will then need to be changed for the required cam needed for the function of the mortice lock.

25YEAR MECHANICAL WARRANTY
