## About us

Emro Products is one of Australia's leading manufacturing and metal product specialists. As a family business, we first opened our doors in Brisbane, Queensland in 1958, producing timber window hardware and later caravan accessories. We quickly established a reputation for quality and reliability and in 1977 moved to our facilities on the Sunshine Coast, Queensland.

The move allowed us to expand our product offering and market reach. Now operating out of two facilities on the Sunshine Coast, we supply Australia with quality builder's hardware, stair and handrail brackets, grabs rails and independent living aids, tubing and fittings, shower tracks and rails, and commercial washroom products. In addition, we manufacture quality custom pieces that meet our customer's specific requirements.

**Modern day Emro** is run by Managing Director, Lisa Johnston, together with her daughter Rachel, Rachel's husband Graeme, and Lisa's husband Chris.

We proudly specialise in zinc alloy die casting, secondary machining, polishing, electroplating, powder coating and plastic injection moulding. Our capability is a result of the dedication, loyalty, skill, and professionalism of our staff.

Our commitment to complete customer satisfaction has always been core to our success. At Emro we are committed to providing quality products, with a high level of customer service, at the very best price; this is one of the benefits of dealing with a family company such as ours.

# Manufacturing

## Custom Manufacturing

Our team can manufacture from scratch and/or easily transform and customise standard products into bespoke solutions that meet your specific requirements. Our team's goal is to exceed customer expectations for delivery, quality and functionality.

## 100% Australian Made

We are proud to say that our cast stair and handrail brackets, marine accessories, cabin hooks and all custom orders are 100% Australian made.

## Die Casting

Die casting is a process of forcing molten metal under high pressure into mould cavities. The die casting method is especially suited for mass production of small to medium sized parts.

## Vibratory Finishing

This process is used to deburr and polish surfaces. Zinc alloy die castings are vibrated in ceramic chips. The vibrating action causes the medium and the work pieces to rub against each other, resulting in a smooth surface. The castings are then washed, dried and finished by electroplating or powder coating.

## Electroplating

Electroplating is the process of depositing a metallic coating upon a negatively charged electrode by the passage of an electric current. The purpose of electroplating is to obtain a metallic coating having different properties or dimensions than those of the basis metal.

Electroplating allows Emro to manufacture according to market needs and preferences. We use rack plating methods to ensure our quality is of the highest standard and consistency.

## Powder Coating

Emro uses a process called Electrostatic Spray Deposition. This method uses a Corona gun for the delivery of powder. The concept of a Corona gun is simply the generation of a field of high voltage through which powder flows.

As the powder flows through the electrical field, it acquires a negative charge. This charge seeks to escape to earth. The part to be sprayed becomes the earth, and accepts the powder coating onto its surface, where it is held by residual charge.

After the application of powder coating, the parts enter a curing oven where, with the addition of heat, the coating chemically reacts to produce a high quality finish.

## **General Builders Hardware**

Emro has been manufacturing and distributing quality hardware products to the Australian market since 1958.

Our hardware products include, but are not limited to: hinges, handles, cabin hooks, hat and coat hooks, pad bolts, roller catches and window spurs.
