auSTYLE architectural hardware

The austyle philosophy demonstrates how good ideas become reality.

Every austyle product is designed and manufactured with an emphasis on quality raw materials, practical functionality and unique designs.

Whether the product is 304 or 316 stainless steel or solid virgin brass, strength in foundation through the use of high grade raw materials ensures austyle products can withstand the tolerances required in all commercial or domestic, internal or external applications.

Austyle products are manufactured to exceed ISO9000 international quality standards and are mechanically and practically functional as well as simple and easy to install.

Our in house design team develops products that reflect current market styles and trends and many of our unique designs have design registrations and mechanical patents to protect their individuality.

Welcome to the austyle range of quality architectural hardware and a new approach in design innovation.

316 STAINLESS STEEL
ANYTHING ELSE IS A COMPROMISE!

opening doors in auSTYLE

auSTYLE Architectural Hardware and Builders Choice Hardware are brands of Superior Brass. Established in 1982 and starting with a traditional range of 10 lever handles, the range now extends to over 3000 products across multiple brands and multiple market segments.

Our hardware range "handles" everything one could possibly require for residential or commercial project.

See opposite page - all brochures are available online.

Icon References

The Ball Bearing is the invisible hero of a friction free operation. The Stainless Steel ball bearing promotes smooth mechanical operation, durability and longevity. The Ball Bearing accompanies a four hour fire rating (Australian Standard # AS1530.4-1997 and BS476.)
There are no assembled plastics or nylons in the austyle lever mechanisms.

Many austyle locks have been fire tested in Australia and have passed either 2 and 4 hours in simulated fire conditions. The rating refers to the fire test only. Installers and specifiers should verify and ensure the appropriate lock meets the appropriate operational building code or fire door requirement.

austyle passage sets have a unique tamper proof mechanism. When installed correctly, the external lever will not have a visible screw head under the concealing ring.
This prevents the handle being tampered with and removed from the external side to gain internal access.

The PVD Brass Finish offers a traditional appearance with a 50 Year Anti-Tarnish warranty against, pitting, discolouring and corrosion. If your project/client has a traditional brief/style with all the benefits of modern durable mechanical operation, this is the product for you. (see also www.superiorbrass.com)

DURABLE SECURITY — 7 Year Mechanical Warranty

Quality is never an accident, it is the result of intention, innovation and skillful execution. When the base materials used in manufacturing are of a high standard, the end product lends itself to comprehensive long term mechanical confidence. Our products will simply work and accompany a 7 year residential warranty.

PATENTED Protect your exclusivity

The austyle ball bearing mechanism is patented which protects its exclusivity, individuality and uniqueness. Choosing an austyle lever handle ensures you're purchasing a product designed in Australia for the Australian market.

All austyle lever handles and heavy duty passage latches have a accompanying long term mechanical warranties.
After correct installation, you can relax with long term confidence that our product will simply continue to operate as it did on day one.

Many items in our range are manufactured using 304 or 316 stainless steel where commonly these types of products are usually manufactured by our competitors in zinc or steel. Stainless Steel offers significantly superior durability and reliability whether used as the base material of the product structure or within its mechanism.

Security

*my*L🔒CK ALL IN ONE Integrated entrance **ROLLER LATCH,** privacy and dead lock functionality.

Upgrade & Improve Your Entrance Security Without Changing Your Door.

The new stainless steel body is designed to retro fit into older style 85mm entrance mortice locks.
Upgrade the security in your home without the need to change your door.

304 Stainless Steel
anything else is a compromise

With front adjustable roller tension.

19217 PVD Brass
29217 ATQ Copper
39217 Pol. SS
49217 Satin SS
59217 Black
69217 Copper (Face/Striker)

304 Stainless Steel
The casing, privacy & dead bolts, roller latch , spindle follower, internal components, face plates and striker plates are manufactured in 304 high grade stainless steel for superior durability.

Keyless Locking
Using the snib when home will prevent anyone opening the door and walking in. It's a quick and simple locking function for every day use and works independently of the dead bolt.

The Indicator Snib
The direction of the snib provides a visual reference to indicate whether the privacy bolt (and the door) is in the locked or unlocked position.

High Security Dead Bolt
Engage the dead bolt for the ultimate level of security when you're out of the house or away on holiday. A solid brass bolt that is 40mm high and 10mm thick and extends 85mm across the door jamb and back into the case will give you security and piece of mind.

Adjustable SS Heavy Duty Roller Latch
After installation from the front of the roller latch; easily a**djust the spring tension** and projection of the roller to suit your desired opening tension.

2 Hour Fire Rated Cylinders

Independent CAM Cylinder & Integrated keylock
The independent CAM cylinder allows you to leave your key in the cylinder while still allowing its use from the outside of the door. Using your key to enter will simultaneously disengage both the privacy and dead bolt so you can enter in au*STLYE*.

How to order: 4 SIMPLE STEP

The 4 Step process helps you combine the Roller Lock with the appropriate au*STYLE* product to create a modern, clean entrance design.

Security Locks
Hinged Doors

- ✓ Designed and Engineered in Australia
- ✓ Heavy duty case and internal mechanical components.
- ✓ Non combustible components

EXTERNAL / ENTRY DOORS

Entrance Snib Set
304 Stainless Steel Plates
120x40mm
#43735
suits all 47.6mm
C-to-C locks

47.6mm

External
Escutch.

Create a clean minimal entrance using the new snibs & escutcheon sets to operate high security locks for front/ external doors.

The snib operates the lock in the same way a conventional lever handle functions opening the door with the snib turn from inside.

Externally, use an entrance handle and the the latch retracts simultaneously when turning the key to unlock for quick, single handed entry.

Recommended lock 49300 or 49001 & cylinder 49144 sold separately.

Quick Release Emergency Escape Function

residential security locks (47.6mm centres)

- ✓ Simultaneously retracts latch when unlocking the door for a quick exit
- ✓ Hardened steel rolling pins in bolt resist hacksawing - 24mm throw!
- ✓ Reversible latch for either LH / RH opening doors

Why are austyle 304 Stainless Steel security locks better ?

Simply put, stainless steel offers significantly better durability and strength when compared with commonly available zinc or steel structured locks. Stainless steel contains higher levels of nickle providing superior corrosive resistance. Our locks are ideal for heavy duty, commercial applications and whenever superior quality and reliability is a significant consideration.

Integrated Snib Plate Locking Options for external Doors

For use with general high security entrance locks [ref p.30]

Create a clean minimal entrance using the new snib & escutcheon sets to operate high security locks for front/external doors.

The snib operates the lock in the same way a conventional lever handle functions opening the door with the snib turn from inside.

Externally, use an entrance handle and the the latch retracts simultaneously when turning the key to unlock for quick, single handed entry.

Suits all 47.6mm C-to-C Locks

Recommended lock 49300 or 49001 & cylinder 49144 sold separately.

47.6mm

Quick Release Emergency Escape Function [49300 Lock]

For use with myLOCK integrated roller, privacy and dead bolt high security entrance lock [ref p.28]

myLOCK

When used in conjunction with a feature entrance handle, the MyLOCK roller latch enables push/pull "passage" function.

Adjustable spring tension in the roller latch to suit your desired opening tension

Use the snib function for quick, day-to-day keyless locking.

Use the double cylinder dead bolt function for operating the dead bolt.

Using the key will simultaneously disengage both the privacy and dead bolts from either side of the door for single handed entry/exit.

Snib & Escutcheon Set Options:

304 Stainless Steel Plates -120x40mm / includes external escutcheon plate / cylinders sold separately [ref p.34]

Suits: Entrance Locks / 47.6mm C-to-C [ref. P.30]	13735/PVD	23735/ATQ	33735/PSS	53735/Black	63735/Copper	43735/Satin SS

Bathroom Locking Options

cavity sliding doors - fully recessed doors
integrated privacy flush pull

Fully Recessed Cavity Sliding Door?

Ideally used in situations where the cavity door recesses all the way back inside the door frame.

These flush pulls are recessed into the door face allowing the door to fully recess into its cavity.

Matching flush pulls for lockable and passage doors available on page 41 for **asthetic consistency.**

Flush Pull: 220x55mm (proj. 1.5mm) Latch: 60mm backset / 80mm overall
